FOREWORD

This syllabus has been prepared by a committee composed of inspectors of schools, training college lecturers and practising teachers from government and non-government schools. It is recommended for use in government primary schools and suggested for use in other primary schools. It is not compulsory, and schools may use any other alternative syllabus approved by the Director of Education.

EDUCATION DEPARTMENT 1967.

PREFACE TO SECOND EDITION

The second edition incorporates the changes made by General Schools Circular No. 123/71 dated 14th October, 1971. The practical system of measurement used by the child in his activities and calculations will now be the metric system of units. At the same time, as long as traditional measures are widely used, they will remain in the syllabus. Teachers are advised not to encourage extensive calculations in traditional units, and to avoid formal conversions between systems.

EDUCATION DEPARTMENT 1973.
