PREAMBLE		7
1. FOREWORD		8
2. GUIDE TO THE SYLLABUS		9 – 11
3. SYLLABUS		12 – 98
Content Area A: Algebra		12 – 46
Unit A1	**The Language of Mathematics**	12 – 13
1.1	Set Language	
1.2	Simple Logic	
Unit A2	**Functions**	14 – 19
2.1	Functions and their graphs	
2.2	Properties and operations of functions	
2.3	Algebraic functions	
2.4	Trigonometric functions and their formulae	
2.5	Exponential and logarithmic functions	
Unit A3	**Mathematics Induction**	20 – 21
3.1	The Principle of Mathematical Induction and its applications	
3.2	Other common variations of the Principle of Mathematical Induction and their applications	
Unit A4	**Inequalities**	22 – 23
4.1	Absolute inequalities	
4.2	A.M. $\geq$ G.M.	
4.3	Cauchy–Schwarz's inequality	
4.4	Conditional inequalities	
Unit A5	**The Binomial Theorem for Positive Integral Indices**	24
5.1	The binomial theorem for positive integral indices	
5.2	Applications of the binomial theorem for positive integral indices	
5.3	Simple properties of the binomial coefficients	

		Page
Unit A6	**Polynomials and Equations**	25 – 27
6.1	Polynomials with real coefficients in one variable	
6.2	Rational functions	
6.3	Polynomial equations with real coefficients in one variable	
Unit A7	**Vectors in R^2 and R^3**	28 – 37
7.1	Definition of vectors and scalars	
7.2	Operations of vectors	
7.3	Resolution of vectors in the rectangular coordinate system	
7.4	Linear combination of vectors	
7.5	Scalar (dot) product and vector (cross) product	
7.6	Application of vectors in geometry	
Unit A8	**Matrices**	38 – 40
8.1	Matrices and their operations	
8.2	Square matrices of order 2 and 3	
8.3	Applications to two dimensional geometry	
Unit A9	**System of Linear Equations in 2 or 3 Unknowns**	41 – 42
9.1	Gaussian elimination and Echelon form	
9.2	Existence and uniqueness of solution	
Unit A10	**Complex Numbers**	43 – 46
10.1	Definition of complex numbers and their arithmetic operations	
10.2	Argand diagram, argument and conjugate	
10.3	Simple applications in plane geometry	
10.4	De Movire's theorem	
10.4a	De Movire's theorem for rational indices	
10.4b	Applications to trigonometric identities	
10.4c	n^{th} roots of a complex number and their geometrical interpretation	

		Page
Content Area B:	**CALCULUS AND ANALYTICAL GEOMETRY**	47 – 98
Unit B1	**Sequence, Series and their Limits**	47 – 50
1.1	Sequence and series	
1.2	Limit of a sequence and series	
1.3	Convergence of a sequence and series	
Unit B2	**Limit, Continuity and Differentiability**	
2.1	Limit of a function	
2.2	Continuity of a function	
2.3	Differentiability of a function	
Unit B3	**Differentiation**	56 – 60
3.1	Fundamental rules for differentiation	
3.2	Differentiation of trigonometric functions	
3.3	Differentiation of composite and inverse functions	
3.4	Differentiation of implicit functions	
3.5	Differentiation of parametric equations	
3.6	Differentiation of logarithmic and exponential function	
3.7	Higher order derivatives and Leibniz's Theorem	
3.8	The Rolle's Theorem and Mean Value Theorem	
Unit B4	**Application of Differentiation**	61 – 68
4.1	The L'Hospital's Rule	
4.2	Rate of change	
4.3	Monotonic functions	
4.4	Maxima and Minima	
4.5	Curve sketching	

		Page
Unit B5	**Integration**	69 – 82
5.1	The Riemann definition of integration	
5.2	Simple properties of definite integrals	
5.3	The Mean Value Theorem for integrals	
5.4	Fundamental Theorem of Integral Calculus and its application to the evaluation of integrals	
5.5	Indefinite integration	
5.6	Method of integration	
	(A) Method of substitution	
	(B) Integration by Parts	
	(C) Reduction Formula	
	(D) Integration by Partial Fractions	
5.7	Improper integrals	
Unit B6	**Application of Integration**	83 – 93
6.1	Plane area	
6.2	Arc length	
6.3	Volume of revolution	
6.4	Area of surface of revolution	
6.5	Limit of sum	
Unit B7	**Analytical Geometry**	94 – 98
7.1	Basic knowledge in coordinate geometry	
7.2	Sketching of curves in the polar coordinate system	
7.3	Conic sections in rectangular coordinate system	
7.4	Tangents and normals of conic sections	
7.5	Locus problems in rectangular coordinate system	
7.6	Tangents and normals of plane curves	
APPENDIX: MATHEMATICS REFERENCE BOOKS		100 – 117
