Design Task

Design task

- Cookies are an all-time favourite for all age groups. People have cookies between or instead of meals or at parties and picnics, so different recipes of cookies are needed to cater for the needs of different target groups.

Design brief

- Design and produce an alternative to the basic soft cookie recipe that caters for one of the following target markets.
 - Advocate for medicinal cuisine
 - Carbo-lover
 - Extravagant
 - Horticulturist
 - Pregnant woman
 - Spicy eater
 - Tea-lover

Flow of work

- In a group of 4, each group will carry out the design brief (different for each group) by modifying the basic soft cookie recipe to cater for the needs of the specified target market.
 - Product concept development
 - Product development Phase I
 - Product evaluation – to determine the acceptability of recipe
 - Product development Phase II – modify recipe
 - Product evaluation – informal sensory evaluation to see if the product meets the set specification criteria
- Presentation & Discussion

Descriptors for reference

SENSORY DESCRIPTORS (Tasting words)

We use our senses to evaluate what we eat, so **sensory descriptors** are words for describing the appearance, taste and texture of food.

The following word bank gives examples of words used for food tastings. The list is not exhaustive, add your own words to the list. Some words fit under more than one heading.

SENSORY DESCRIPTORS

USES OF SENSORY ANALYSIS IN FOOD INDUSTRY

- food product development
- studying effects of ingredients, formulation, and process on final product
- measuring, predicting shelf life
- quality control and quality assurance
- competitor benchmarking
- investigation and prediction of taints

Discussion Points

- Right first time?
- What would you try next time?
- What other alternative ingredients would you consider using?
- What limitations did you encounter in your sensory evaluation?
- Who would be your competitors in the HK market.
- Would you compete by price, quality or brand?
