Learning and Teaching

Subject Title : **Data Application for Business**
Area of Studies : **Business, Management and Law**
Course Provider : **Hong Kong Institute of Technology**

In Data Application for Business, student-centred learning and teaching activities are designed to enable students to understand fundamental theories and concepts, develop their generic skills, and address their career aspirations in data application for business.

Different modes of activities are employed to provide students with a systematic understanding about the context (e.g. lecture, discussion, workshop and guided practice on business operations and data analysis) and eye-opening opportunities to experience the complexity of the context (e.g. visits to business operators, experiential learning activities and seminars).

Students acquire an understanding of the requirements, fundamental knowledge and skills essential for further learning within the area through learning-by-practising opportunities in an authentic or near-authentic environment (e.g. discussion, case studies, practical workshop, report and presentation where students learn the relationship between data and business decision and the importance of data to the sustainable development of organisations).

Students are also encouraged to develop and apply conceptual, practical and reflective skills to demonstrate entrepreneurship and innovation (e.g. based on the results of data analysis, students recommend solutions for business innovations or improving internal efficiencies). Students are given opportunities to integrate the knowledge and skills acquired and consolidate their learning (e.g. in the self-directed business project, students apply data analysis, writing and presentation skills to conduct a business project on real business issues).

Applied Learning (Senior Secondary Level)

2020-22 Cohort

Curriculum Pillars of Applied Learning in Context – Data Application for Business

Upon completion of the subject, students should be able to:

- demonstrate understanding of data analysis for business and the importance of information of data in business;
- devise a plan to generate useful retail information to fulfill preset objectives;
- apply beginners' data analysis skills to transform data to useful retail information;
- demonstrate communication skills in the data analytic context;
- observe legal requirements and code of ethics for handling, processing and reporting data; and
- develop self-understanding for further studies and career development in the related field.

Through the specific contexts related to the subject, students have different learning opportunities, for example:

1. **Career-related Competencies**

- define business process and identify different types of business activities in their daily life;
- identify the key steps in data analysis and understand their importance in business operation, development and everyday decision-making;
- collect information from viable and credited sources using appropriate techniques;
- analyse and evaluate information with appropriate methods;
- make decisions with evidential supports from analysis;
- report the findings with professionalism; and
- observe professional ethics related to collection and processing of data.

2. **Foundation Skills**

- prepare data analysis report and conduct oral presentation;
- identify appropriate measurement and analytical tools to evaluate data; and
- utilise information technology in collecting, analysing, and presenting information.

3. **Thinking Skills**

- apply stepwise problem-solving and decision-making approaches through devising data analysis plan to meet the predefined objectives;
- exercise evidence-based decision-making in marketing and retail contexts;
- identify viable and credited information sources and make plans to acquire information;
- evaluate the collected information using sound analytical approaches;
- generate recommendations to improve business operations; and
- extend data analysis skills in contexts beyond business operations.

4. People Skills

- in data analysis project, establish schedules and assign roles and responsibilities for group members based on constraints in time and resources;
- adopt appropriate communication techniques in interacting with peers during group project discussions and with interviewees during collection of data;
- work in groups to conduct data analysis and make collective decisions;
- respect and capitalise on the diversity among peers to form project teams; and
- manage priorities in time and resources allocation in meeting schedule and achieve targets.

5. Values and Attitudes

- respect honesty in handling data and reporting results;
- comply with legal requirements and code of ethics in collecting, handling and reporting data;
- take responsibility and accountability in fulfilling individual and group roles; and
- demonstrate self-confidence in presentation.
