Learning and Teaching

Course Title : Multimedia Storytelling
Area of Studies : Media and Communication

Course Provider : School of Continuing Education, Hong Kong Baptist

University

In Multimedia Storytelling, student-centred learning and teaching activities are designed to enable students to understand fundamental theories and concepts, develop their generic skills, and address their career aspirations in the field of creative media and communication.

Different modes of activities are employed to provide students with a systematic understanding about the context (e.g. lectures on the importance of storytelling and the use of technological tools) and eye-opening opportunities to experience the complexity of the context (e.g. company visits and mentorship activities).

Students acquire an understanding of the requirements, fundamental knowledge and skills essential for further learning within the area through learning-by-practising opportunities in an authentic or near-authentic environment (e.g. hands-on content co-creation workshop).

Students are also encouraged to develop and apply conceptual, practical and reflective skills to demonstrate entrepreneurship and innovation. Students are given opportunities to integrate the knowledge and skills acquired and consolidate their learning (e.g. in the group project, students integrate knowledge and skills in multimedia storytelling to plan and create multimedia work that advances a social cause).

Applied Learning

2023-25 Cohort; 2025 HKDSE

Curriculum Pillars of Applied Learning in Context – Multimedia Storytelling

Through the specific contexts related to the course, students have different learning opportunities, for example:

1. <u>Career-related Competencies</u>

- create simple multimedia production with digital technologies, such as short videos:
- understand basic visual communication principles to identify suitable visual strategies for delivering tailored messages to target audience;
- strengthen communication skills to communicate effectively with target audience and achieve goals; and
- understand the work requirements of creative media industries.

2. Foundation Skills

- demonstrate effective communication skills through presentation in verbal and written formats in creative media contexts;
- apply mathematical skills in data visualisation; and
- enhance information technology skills through multimedia production using hardware and software tools.

3. Thinking Skills

- apply problem-solving skills in the production process of multimedia content on digital platforms for target audience;
- develop analytical skills through evaluating the information of target audience; and
- through content creation, generate creative ideas for grasping new opportunities.

4. People Skills

- demonstrate collaboration skills during group projects and mentorship discussions; and
- apply self-management skills through setting up schedules and monitoring the progress of the group project.

5. Values and Attitudes

- demonstrate empathy and respect for others through identifying the cognitive and affective needs of the audience;
- developing self-motivation in learning through completing assignments; and
- demonstrate respect for intellectual property rights and professional ethics when conducting multimedia production.
