Using Google Earth Presentation Mode to Conduct Pre-trip Preparatory Activities for Geography Fieldwork - Virtual Pre-trips to Ng Tung River Drainage Basin in Hong Kong

[Student Worksheets]
[Mr KWONG Siu-wah, Geography Teacher of Po Leung Kuk Lo Kit Sing (1983) College]

Name: __________________ Class: __________________

Objectives:
● To familiar with key features and surrounding environments of the Ng Tung River Drainage Basin
● To identify different data types: primary and secondary data
● To assess risks and potential danger of conducting fieldwork in fluvial environments
● To equip students’ I.T. skills (especially in Geographical Information System / GIS)

A. Geography Issue Enquiry: River
Rivers receive water from sources like surface runoff and ground water to form discharge. In general, the size of drainage basin, drainage density, gradient, vegetation, land use, geology etc. will influence the amount of discharge in a river.

B. Drainage Characteristics of the Ng Tung River
Prior to the virtual pre-trip, you may search some online information about Ng Tung River drainage basin first.
Answer the following questions after browsing the following websites:
1. GeoInfo Map (https://www.map.gov.hk/)
2. JC Wise – Rivers @ HK Database (Rivers in Hong Kong) (http://www.jcwise.hk/gis/)

<table>

C. Using Virtual Pre-trip Materials to Conduct Preliminary Field Study

Using online pre-trip materials helps **save time** and **costs**. It also helps to identify and **prevent risks and danger** when an outdoor fieldwork is conducted. In this set of virtual pre-trip materials of Ng Tung River, the checkpoints are set at approximately 1.2km interval to display the change of river channel and its surrounding environments.

D. Steps to Use this set of Google Earth Pre-trip Materials to Conduct Virtual Fieldwork

1. **Using Personal Computers / Tablets**
   - **Step 1:** Scan the QR Code on the right or visit the website [https://qrgo.page.link/bExDr](https://qrgo.page.link/bExDr)
     - The browser will show the Google Earth Web.
   - **Step 2:** Press the icon "Present", the virtual pre-trip begins.
   - **Step 3:** Navigate to other checkpoints using the “navigation tool bar” and view the landscape, photographs and basic information of the checkpoints.

2. **Using Mobile Phones**

Download “Google Earth” from APP Store / Play Store (if not installed previously)

**Step 1:** Scan the QR Code below or visit the website [https://qr.go.page.link/bExDr].

![QR Code](image)

**Step 2:** Open “Google Earth” APP and Press “≡” on the top-left corner of the screen.

![Google Earth APP](image)

**Step 3:** Press “Projects” to open the list of projects.

E. Assessment Questions after the Virtual Pre-Trip

Refer to the virtual fieldwork that you have just browsed and answer the following questions related to the planning stage of a fluvial fieldwork.

(a) (i) Describe the changes of landscape along Ng Tung River from Checkpoint A to Checkpoint K. How do these changes affect your planning of an on-site / authentic fieldwork at Ng Tung River? (4 marks)

(ii) Describe and explain the changes of altitude along the Ng Tung River. How do these changes affect your planning of the on-site / authentic fieldwork at Ng Tung River? (4 marks)

(iii) What types of settlements are found around Checkpoints D and I of Ng Tung River respectively? How do these settlements bring potential advantage(s) and disadvantage(s) to your fieldwork? (5 marks)

(b) What type of data (primary or secondary) is presented in the virtual fieldwork? Suggest another example of the same data type that can help your river fieldwork. (3 marks)

(c) Suggest ONE category of data about channel characteristics of the Ng Tung River that cannot be retrieved from the virtual fieldwork. Discuss how you can get this data category. (2 marks)

(d) Discuss some ways to prevent the potential danger and accidents identified in your planned fieldwork. (4 marks)
(e) Besides preventing danger, explain other advantages of conducting a virtual pre-trip before an on-site / authentic fieldwork. (3 marks)

(f) Suggest a geographical topic or geographical hypothesis that could be studied in an on-site/authentic fluvial fieldwork of the same area. (3 marks)
