

## **Hong Kong Diploma of Secondary Education Examination**

### **Physics**

The following list of data, formulae and relationships will be provided in the question papers for candidates' reference:

## List of data, formulae and relationships

### Data

|                                  |                                                                                   |                                |
|----------------------------------|-----------------------------------------------------------------------------------|--------------------------------|
| molar gas constant               | $R = 8.31 \text{ J mol}^{-1} \text{ K}^{-1}$                                      |                                |
| Avogadro constant                | $N_A = 6.02 \times 10^{23} \text{ mol}^{-1}$                                      |                                |
| acceleration due to gravity      | $g = 9.81 \text{ m s}^{-2}$ (close to the Earth)                                  |                                |
| universal gravitational constant | $G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$                          |                                |
| speed of light in vacuum         | $c = 3.00 \times 10^8 \text{ m s}^{-1}$                                           |                                |
| charge of electron               | $q_e = 1.60 \times 10^{-19} \text{ C}$                                            |                                |
| electron rest mass               | $m_e = 9.11 \times 10^{-31} \text{ kg}$                                           |                                |
| permittivity of free space       | $\epsilon_0 = 8.85 \times 10^{-12} \text{ C}^2 \text{ N}^{-1} \text{ m}^{-2}$     |                                |
| permeability of free space       | $\mu_0 = 4\pi \times 10^{-7} \text{ H m}^{-1}$                                    |                                |
| atomic mass unit                 | $u = 1.661 \times 10^{-27} \text{ kg}$                                            | (1 u is equivalent to 931 MeV) |
| astronomical unit                | $\text{AU} = 1.50 \times 10^{11} \text{ m}$                                       |                                |
| light year                       | $\text{ly} = 9.46 \times 10^{15} \text{ m}$                                       |                                |
| parsec                           | $\text{pc} = 3.09 \times 10^{16} \text{ m} = 3.26 \text{ ly} = 206265 \text{ AU}$ |                                |
| Stefan constant                  | $\sigma = 5.67 \times 10^{-8} \text{ W m}^{-2} \text{ K}^{-4}$                    |                                |
| Planck constant                  | $h = 6.63 \times 10^{-34} \text{ J s}$                                            |                                |

### Rectilinear motion

For uniformly accelerated motion :

$$\begin{aligned}
 v &= u + at \\
 s &= ut + \frac{1}{2}at^2 \\
 v^2 &= u^2 + 2as
 \end{aligned}$$

### Mathematics

|                             |                        |
|-----------------------------|------------------------|
| Equation of a straight line | $y = mx + c$           |
| Arc length                  | $= r\theta$            |
| Surface area of cylinder    | $= 2\pi rh + 2\pi r^2$ |
| Volume of cylinder          | $= \pi r^2 h$          |
| Surface area of sphere      | $= 4\pi r^2$           |
| Volume of sphere            | $= \frac{4}{3}\pi r^3$ |

For small angles,  $\sin \theta \approx \tan \theta \approx \theta$  (in radians)

|                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                  |
