

## Introduction to Geometry – Angles and Lines

**Level:** Key Stage 3

**Dimension:** Measures, Shape and Space

**Module:** Learning Geometry through an Intuitive approach

**Unit:** Introduction to Geometry

**Student ability:** Low to Average

### Content Objectives:

After completing the activity, students should have a consolidated understanding of the key concepts related to lines and angles in geometry.

### Language Objectives:

After completing the activity, students should be able to

- understand the English terminology for describing lines and angles found in introductory Geometry (e.g., *point*, *straight line*, *line segment with end points*, *point of intersection*, *parallel lines*, *perpendicular lines*, *angle*, *acute angle*, *right angle*, *obtuse angle*, *straight angle*, *reflex angle*, *round angle* and *vertex*);
- use the English terminology to complete the follow learning tasks:
  - matching the English names of various angles with their corresponding diagrams
  - classifying angles into acute angles, right angles, obtuse angles, straight angles, reflex angles and round angles
  - complete a cross-word puzzle by labelling a set of given angles in a diagram
- follow English instructions on solving problems concerning this topic and work on related problems written in English.

### Prerequisite knowledge:

Students should have learned about the properties of straight lines and angles in key stage 2, through the medium of Chinese.

**Time:** 1 lesson (35 minutes)

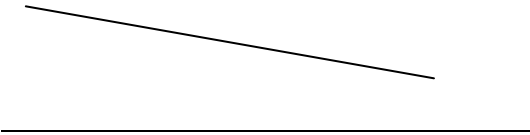

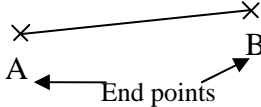

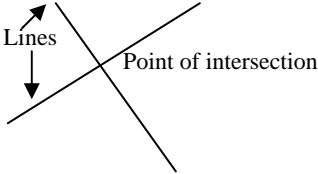

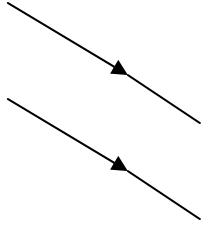

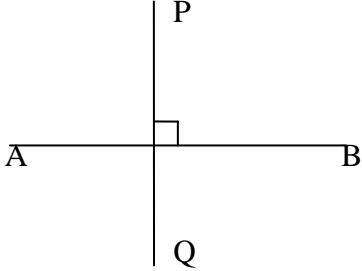

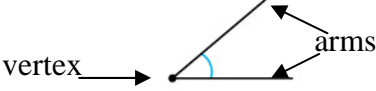

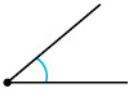

**Procedure:**

1. The teacher should go through the vocabulary list with the students, reading the terms clearly and slowly (for the first time) to help students master the correct pronunciation of the terms and remember them better.
2. The teacher should discuss the properties of each item with the students using the illustrations list.
3. The teacher should ask the students to finish Part A to check how well they can recognise the vocabulary on the list.
4. The teacher should then discuss the answers to Part A with the students.
5. The teacher should ask the students to finish Part B and present their answers.
6. The teacher should then ask the students to finish Part C and group in pairs to discuss their answers.

**Explanatory Notes for Teachers:**

1. This activity is designed to revise simple concepts related to lines and angles using English as the medium of instruction.
2. The vocabulary list with an illustration for each term can provide a quick reference for the students during the activity.
3. In discussing the answers with students, apart from asking the students to give their answers, the teacher may also ask the students to explain the answers.

**Vocabulary list:**

Point	點	Small dot “.” or cross “×”
Straight line	直線	
Line segment with end points	線段與端點	
Point of intersection	(相)交點	
Parallel lines	平行線	Two lines in the same plane (同一平面上) do not intersect (不相交) 
Perpendicular lines	垂直線	
Angle	角	
Acute angle	銳角	greater than (大於) $0^\circ$ but less than (少於) $90^\circ$ 

Right angle	直角	equals to $90^\circ$	
Obtuse angle	鈍角	greater than $90^\circ$ but less than $180^\circ$	
Straight angle	平角	equals to $180^\circ$	
Reflex angle	反角	greater than $180^\circ$ but less than $360^\circ$	
Round angle	周角	equals to $360^\circ$	

Name: \_\_\_\_\_ Class: \_\_\_\_\_ ( )

**Lines and angles**

A) Match the following terms (1-8) with the diagrams (A-H) (write down the numbers only):

- 1. vertex                      2. acute angle                      3. right angle                      4. obtuse angle
- 5. reflex angle                      6. perpendicular lines                      7. parallel lines                      8. line segment

A

E

B

F

C

G

D

H

A.		B.		C.		D.	
E.		F.		G.		H.	

B. Classify the following angles according to their sizes.

(i) Label the following angles as an acute angle, right angle, obtuse angle, straight angle, reflex angle or a round angle.

(a)  $10^\circ$

(b)  $85^\circ$

(c)  $148^\circ$

(d)  $90^\circ$

(e)  $273^\circ$

(f)  $180^\circ$

(g)  $360^\circ$

(h)  $238^\circ$

(ii) Write down the name of the kind of angles shown in the following

(a)  $\angle AOD$

(b)  $\angle COD$

(c)  $\angle COB$

(d)  $\angle BOD$

(e)  $\angle AOB$

(f)  $\angle AOC$

C) Refer to the figure below and complete the crossword puzzle which follows.

Across

1.  $\angle AFD$  is a \_\_\_\_\_ angle.
3.  $\angle EFA$  is a \_\_\_\_\_ angle.
5. ED and AB are \_\_\_\_\_ line segment.
6.  $\angle BCD$  is an \_\_\_\_\_ angle.
7.  $\angle FAB$  is an \_\_\_\_\_ angle.

Down

2. F is the point of \_\_\_\_\_  
of line AC and BE.
4. EB and AD are \_\_\_\_\_  
to each other.

Suggested answers:

A)

A.	2	B.	7	C.	4	D.	5
E.	1	F.	8	G.	3	H.	6

B) i)

- a) acute angle      b) acute angle      c) obtuse angle      d) right angle  
e) reflex angle      f) straight angle      g) round angle      h) reflex angle

B) ii)

- a) straight angle      b) acute angle      c) right angle      d) obtuse angle  
e) acute angle      f) obtuse angle

C) Across

1. straight      3. right      5. parallel      6. obtuse      7. acute

Down

2. intersection      4. perpendicular
