Written Test

Sample (3) Answer

The average score of six students in a Mathematics test is 83.5. Their scores are 6 different whole numbers, where the highest is 97 and the lowest is 71. If the 6 scores are arranged in descending order from the highest value to the lowest, what is the maximum possible value of the 4th score?

Ans: The maximum possible value of the 4^{th} score is 86
