## Written Test

## Sample (3)

The average score of six students in a Mathematics test is 83.5. Their scores are 6 different whole numbers, where the highest is 97 and the lowest is 71. If the 6 scores are arranged in descending order from the highest value to the lowest, what is the maximum possible value of the 4<sup>th</sup> score?

Ans: The maximum possible value of the 4<sup>th</sup> score is \_\_\_\_\_\_.
